Sunshine

Hello Bloomers,

I'm Daisy and I'm here to talk to you about sunshine.

DID YOU KNOW that without the sun, there would be no life on earth? Plants and trees need the sun because they use its **ENERGY** to make their own food.

A plant takes water from its roots, **CARBON DIOXIDE** from the air and energy from the sun to make food for itself. This is called **PHOTOSYNTHESIS**.

Humans need the sun because they need plants to eat!. Also, when the plant takes in Carbon Dioxide, they give off **OXYGEN**. That is what we breathe.

Thanks Bloomers!
